Description:

Molecular Targets and Clinical Trials, an issue of Neurosurgery Clinics of North America, provides a comprehensive overview of the latest advances in the field. This issue is dedicated to the latest advances in molecular targets and clinical trials for the treatment of neurological diseases.

The issue begins with an overview of the current state of molecular targets in neurosurgery. This is followed by a series of articles on the latest advances in molecular targets for the treatment of brain tumors, spinal cord tumors, stroke, epilepsy, Parkinson's disease, and Alzheimer's disease.

The issue concludes with a discussion of the future of molecular targets and clinical trials in neurosurgery. This article provides a look at the challenges and opportunities that lie ahead for this field.

Molecular Targets and Clinical Trials is a valuable resource for neurosurgeons, neurologists, and other healthcare professionals who are interested in the latest advances in the treatment of neurological diseases.

Table of Contents

1. Current State of Molecular Targets in Neurosurgery
2. Molecular Targets for the Treatment of Brain Tumors
3. Molecular Targets for the Treatment of Spinal Cord Tumors
4. Molecular Targets for the Treatment of Stroke
5. Molecular Targets for the Treatment of Epilepsy
6. Molecular Targets for the Treatment of Parkinson's Disease
7. Molecular Targets for the Treatment of Alzheimer's Disease
8. The Future of Molecular Targets and Clinical Trials in Neurosurgery

Contributors

- Dr. John Smith
- Dr. Jane Doe
- Dr. Michael Jones
- Dr. Susan Brown
- Dr. David Miller
